

## All-Fill series 10 volumetric dosing system and Guttridge feeder

The All-Fill series 10 volumetric dosing system was manufactured here in the UK, at All-Fills' Bedfordshire manufacturing site. Both the volumetric dosing system and Guttridge feeder were bought by Proctor & Gamble Beijing, where it continued to be in service for 3 years before being moved in to storage. DJS Process Consulting Ltd purchased the unwanted equipment from Proctor & Gamble and arranged for shipment back to the UK.

The hopper capacity is 38 litres

- Stainless steel contact parts
- No tools removeable change parts
- Auger machined from solid
- Independent agitation drive
- Large capacity seamless hopper
- Plc controlled touch screen panel
