

Graseby Specac Manual Hydraulic Press, 15ton capacity

This instrument is designed fundamentally to create pellet samples which can then be processed using analytical equipment such as FTIR, KBr and XRF. This model has a 15ton loading capacity and is intended for a wide range of laboratory press applications. The system is compact with a small foot print, making it ideal for us in smaller laboratories.

At an additional cost, a 13mm evacuable pellet die which is used to prepare high quality pellets for spectroscopy techniques is also available. The pellet die compacts powdered samples in to discs.
